

G2 Filtration

Power – Generation G2 Filtration

**Turbine Oil
Lube Oils – Coal Pulverizers
Transformer Oil**

Effective removal of solids and water

Clean, dry oil can extend equipment life between 8-10 times normal operating life. The centrifuge is recognized as the most effective method of removing contaminants from fluids. The G-2 centrifuge offers a superior alternative to media filters. The G-2 removes small particles and water better than any filter, generating a centrifugal force 2,000 times greater than gravity. The system is driven hydraulically yielding a more economical cost over conventional centrifuges.

Performance

- Restore to an acceptable ISO cleanliness
- Continuously remove water
- Prevent system sludging and premature oil degradation
- Removes particles down to 0.1 micron

Simplicity

- No cartridges, screens, or filter elements to replace
- Low maintenance
- Fast, efficient, and reliable operation

Specifications

- 40 GPM Solids Removal
- 6 Gallons per Hour water removal
- 480 Volt 3 Phase 60 Hz

Patent No.6,702,729
