

G2 Filtration

Centrifuge / Tank System G2 Filtration

Effective removal of solids to less than 1 micron

We provide design, engineering and manufacturing and the highest level of craftsmanship in building custom tank systems for the automotive, industrial, process chemical, pharmaceutical, pulp & paper, and water treatment sectors. G2 tank systems combine the latest technology, complete with pumps, ultra-sonic level control, monitor/control panel. Our turnkey systems deliver clean fluid to the process. They are completely pre-piped and pre-wired to a junction box, ready for use upon delivery including high performance centrifuges to maintain fluid cleanliness. The G-2 uses centrifugal force to remove particles down to one-tenth of a micron in diameter. Contaminants aren't continually circulated through your system, so the cleaner fluid has a longer service life and reduces wear on components. The G-2 centrifuge removes smaller particles better than any filter. The G-2 unit generates a centrifugal force 2,000 times greater than gravity.

Benefits

- Cleaner fluid with a longer service life
- Easy installation
- Low initial cost

Simplicity

- No cartridges, screens, or filter elements to replace
- Low maintenance
- Fast, efficient, and reliable operation
- Pre-piped
- Pre-wired

Specifications

- 4-100 GPM Solids Removal
- 240 - 480 Volt 3 Phase 60 Hz
- 600 gallon, 800 gallon standard (other sizes available)
- Stainless Steel construction (other materials available)

Patent No.6,702,729
