

# G2 Filtration

## Coolant Tank Top Centrifuge G2 Filtration

### Improve the removal of solids in continuous belt filters

Coolants and cutting oils become unstable when they become excessively contaminated with bacteria, tramp oil, metal fines, or wastes. The G-2 centrifuge offers a superior alternative to media filters. The centrifuge is recognized as the most effective method of removing contaminants from fluids. The G-2 removes small particles better than any filter, generating a centrifugal force 2,000 times greater than gravity. The G-2 Tank Top is designed to install on new or existing tanks. G-2 eliminates the small particles and eliminates bacteria.

### Benefits

- Cleaner coolant with a longer service life
- Lengthened tool life
- Machine accuracy maintained
- Reduced machine downtime
- Lower cost per workpiece
- Reduced pump wear
- Easy installation
- Can be used on new or existing machines
- Low initial cost

### Simplicity

- No cartridges, screens, or filter elements to replace
- Low maintenance
- Fast, efficient, and reliable operation

### Specifications

- 4, 8, 20, and 40 GPM Solids
- 240 - 480 Volt 3 Phase 60 Hz

Patent No.6,702,729
